Dell EMC SourceOne End of Life

Dell EMC SourceOne is reaching its end of life (EOL) date and Dell will no longer offer support for those organizations using the archive and email management system. This urgent deadline forces IT leaders to decide how they will approach the future management of their critical business data.

Trying to delay this decision is a huge risk for many reasons:

- Maintaining unsupported or unpatched on-prem infrastructure introduces security risks.
- Supporting on-prem versions of what Microsoft now has in Microsoft 365 is a dead-end career. The talent has either retired or decided to take on new skills and new jobs; hence, companies give the on-prem management to whoever is left.
- There is a significant ROI when modernizing archives, as evidenced by the Indiana Office of Technology who saved \$500k annually after an archive migration. Microsoft 365 boasts virtually unlimited storage, so you can save money by retiring on-prem archiving and moving the data home to Microsoft – making the most of cloud storage you're already paying for.

In short, IT leaders must take urgency to quickly identify an alternative and then safely move all existing data without business disruption.

Arrive and Thrive in Microsoft 365 with Quest and Dell.
